

# Modern Interface Design for Film Search Engine

Team EndFrame:  
Nadeem Nasimi  
Elliot Radsliff  
Anmol Singh  
Devon Wasson

# Background

- Studying films can be tedious
- Keyword search of captions can help find relevant scenes
- Finding patterns and analyze films
- Unique search engine for films

# Project Requirements

- Streamline output of relevant films
- Improved output of individual films
- Improve the navigation between searches
- Add more features

**BEFORE**

## The Film Search Engine

[Home](#)

### The Film Search Engine

by Dr. John Hunter, Justin Eyster, and Dale Hartman  
at Bucknell University

Use the search box below to analyze the usage of a word/phrase  
within a database of 100 movies released after the year 1935.

Limit results to a specific genre:

Limit results to movies originally released between:

OR Graph Two Keywords/Phrases

This site is a work in progress:

## Research films like never before.

Find out what was happening in a film when a specific phrase was said using the text search.

Use the color search to find scenes in films with similar colors to images you upload.

Click on one of the options below to get started.

Aa

Text Search

Color Search

# BEFORE

Line #1387

From 01:28:42,516 to 01:28:45,178

My star client disappears off the face of the earth!

Line #1421

From 01:30:38,132 to 01:30:40,828

You're a big shining star. You're a superstar.

# AFTER

## Cars (2006)

## Chicago (2002)

## Cars (2006)

117 minutes

Line 1387:  
"My star client disappears off the face  
of the earth! "

01:28:42

My star client disappears off the face of the earth!  
01:28:42

# Design

- Prototyping Process
  - Paper Prototype
  - Digital Wireframe
- User Interviews
  - Refine design
  - Revealed usefulness of features
  - Revealed flaws in user experience

# Methods

- JavaScript library: React
  - Readable and maintainable code
  - One-way data flow
  - React-Redux to store client-side data

# Methods

- Development environment
  - Node Package Manager to install dependencies with a single command
  - Watchify for automatic bundling of our code
  - Browserify and Babel for transpiling React code

# The Path Forward

- Implement the color search
- Move the project to AWS
- Add more filter options with scalability
- Have some stats and graphical representation

# Acknowledgements

- Professor John Hunter, Digital Humanities
- Professor Brian King, Computer Science
- Dale Hartman '18, Justin Eyster '17
- College of Engineering
- Department of Computer Science

THANK YOU!
